

CB60-2100-90

Capacitor Bank for Electronic Speed Controller

Overview

The CB60-2100-90 is a capacitor bank for Plettenberg electronic motor controller ("MST"). The capacitor bank reduces current spikes at the battery input lines and stabilizes the input voltage at the controller.

Features

- Protects MST
- Ultra-low ESR
- Lightweight

Delivery Scope

1. Capacitor bank

Specification

Parameter	Value
Weight	120 g
Voltage	63 V
Current	25.2 A
Capacitance	2100 µF
ESR	2 mΩ
Cable length	190 mm
Cable size	4 mm ²
Protection	IP64

(in mm)

Installation Guide

Capacitor bank cable can be cut to desired length. Cable must be crimped or soldered to the battery input of the MST.
