

Accessories for MST Series

CB80-660-90

Capacitor Bank for Electronic Speed Controller

Overview

The CB80-660-90 is a capacitor bank for Plettenberg electronic motor controller ("MST"). The capacitor bank reduces current spikes at the battery input lines and stabilizes the input voltage at the controller.

Features

- Protects MST
- Ultra-low ESR
- Lightweight

Delivery Scope

1. Capacitor bank

Specification

Parameter	Value
Weight	95 g
Voltage	80 V
Capacitance	660 µF
Current	23.8 A
ESR	2 mΩ
Cable length	190 mm
Cable size	4 mm ²
Protection	IP64

Installation Guide

Capacitor bank cable can be cut to desired length. Cable must be crimped or soldered to the battery input of the MST.
