

CB60-2100-90

Capacitor Bank for Electronic Speed Controller

Overview

The CB60-2100-90 is a capacitor bank for Plettenberg electronic motor controller ("MST"). The capacitor bank reduces current spikes at the battery input lines and stabilizes the input voltage at the controller.

Features

- Protects MST to ensure reliable operation and long service life
- Ultra-low ESR for maximum efficiency and reduced power losses
- Lightweight construction for optimized handling and easy integration
- Designed to meet demanding application requirements
- Suitable for compact system setups and weight-critical environments

Specification

Part number	58-10000355
Voltage	63 V
Capacitance	2100 µF
Current	50.00 A
ESR	0.75 mΩ
Cable length	190 mm
Cable size	4 mm²
Protection	IP64
Max Temperature	135 °C
Endurance	4000 h
Weight	105 g

Complementary Products

- Plettenberg MSTs:
 - MST 60-80
 - MST 60-130
 - MST 60-260 K

Installation Guide

The cable must be either crimped or soldered to the MST battery input. Please ensure correct capacitor bank polarity during installation.

The capacitor bank cable can be shortened to the required length.

Notes:
All Dimensions in the Technical Drawing are millimeters (mm)
